ABMESSUNGEN (in mm)

STANDARD-LIEFERUNG

- einteilige Verkleidung (Rückwand, Bodenrost, Ausblasrost und Seitenwände)
- abnehmbare Frontplatte
- Low-H₂O-Wärmetauscher, mit schmutz- und staubabweisender Lackierung in Graphitgrau (RAL 7024)
- vormontierte Lüfter-Einheit mit Bedienfeld, Steuerung und Stromversorgung 24 VDC
- Verbundrohr, T-Stück, Entlüftungsstopfen 1/2", 2 Entleerungsstopfen 1/2" und Klemmverschraubungen für den internen hydraulischen Anschluss
- Stockschrauben: ggf. Regulierungsabstand Wand - Rückwand (0 ≤ 35 mm)

FARBEN

Umweltfreundlich lackiert mit kratz- und stossfester Oberflächenverkleidung mit hoher UV-Beständigkeit

Standard Farben

- Verkehrsweiß RAL 9016 (133), soft touch leicht strukturierter Satinlack
- Sandstrahlgrau (001), fein strukturierter Metallack
- off-black (145), Soft Touch leicht strukturierter Satiniertes Lack

Andere Farben

Siehe Jaga Farbkarte.

Aufpreis je nach Länge des Geräts:

- Länge < 100 cm
- Länge von 100 cm bis 200 cm
- Länge > 200 cm

MODELL

BT1: Auslassrost oben

BF1: Ausblasrost in der Frontplatte

ECOREVIVA HYBRID

WASSERSEITIGE ANSCHLUSSMÖGLICHKEITEN (1/2" Innengewinde)

Der EcoReviva Hybrid ist ein Augstauschheizkörper, der für jede bestehende Anschlussmöglichkeit eine Lösung bietet. Dank des mitgelieferten Mehrschichtrohrs und T-Stücks wird im Inneren des Geräts eine unsichtbare hydraulische Verbindung geschaffen. Standardmäßig werden die Geräte mit Anschluss 67 geliefert. Der Anschluss kann jedoch auf der Baustelle flexibel angepasst werden.

Anschluss 37

Anschluss 67

Anschluss 62

Anschluss 32

ELEKTRISCHER ANSCHLUSS

Option 1: HÖHE ≥ 050

Ab Höhe 50 ist es möglich, das mitgelieferte Netzteil (230 VAC - 24 VDC) zu verwenden.

Option 2: HÖHE < 050

Montieren Sie den mitgelieferten Netzadapter außerhalb des Geräts.

Option 3: Alle Höhen

Ein Stromkabel 24 VDC vorsehen.

Stromversorgung DIN-Schiene Montage

- DIN-Schienen- oder Wandmontage in einem Schaltschrank
- In Übereinstimmung mit UL60950 / UL508 / EN 60950-1 / TUV EN61558-2-16 / Klasse 2
- Ausgangsspannung 24 VDC
- Eingangsspannung 100 - 240 VAC
- Schraubanschluss
- LED-Anzeige

| ART. NR. | L mm | LEISTUNG Watt | AUSGANGSSTROM A |

| TYP | FUNKTION | BEDIENFELD | EXTERNES 0-10V STEUERSIGNAL | WASSERTEMPERATURSENSOR | LUFTEMPERATURSENSOR |
|-------------------------------|---|------------|-----------------------------|------------------------|---------------------|
| Jaga ACO (D09) |    | ✓ | - | ✓ | ✓ |
| Jaga BMS 0-10V-Regelung (D03) |   | - | ✓ | ✓ | - |

JAGA ACO (D09)

- Die Ventilatorgeschwindigkeit wird manuell in 3 Stufen über das Bedienfeld gewählt.
- Wenn die Wassertemperatur unter 24 °C liegt und die Luft wärmer ist als das Wasser im Wärmetauscher, werden die Ventilatoren eingeschaltet. Das Gerät kühlt dann den Raum.
- Wenn die Wassertemperatur 28°C übersteigt und die Luft kälter ist als das Wasser, werden die Ventilatoren eingeschaltet. Das Gerät heizt dann den Raum.
- Das Gerät **schaltet automatisch** vom Heiz- in den Kühl- und in den Standby-Modus.

JAGA BMS 0-10V-REGELUNG (D03)

- Die Ventilatorgeschwindigkeit wird nur **durch ein 0-10-V-Signal (DC) gesteuert**, das von einem externen Steuersystem an die Geräteelektronik angelegt wird. Das 0-10-V-Signal kann von einem Jaga-Thermostat oder einem anderen Hausautomatisierungs- oder Gebäudemanagementsystem geliefert werden.
- Wenn die Steuerspannung 1 V oder mehr beträgt und die Wassertemperatur über 28°C oder unter 24°C liegt, laufen die Ventilatoren an. Die Drehzahl steigt proportional zur angelegten Steuerspannung. Bei 10 V Steuerspannung laufen die Ventilatoren mit maximaler Drehzahl.
- Wenn ein Hybridgerät mit Jaga BMS-Steuerung mit einem **thermoelektrischen Ventilmotor** ausgestattet ist, der an die interne Elektronik angeschlossen ist, öffnet sich das Ventil, wenn die Steuerspannung 1 V überschreitet.

Möchten Sie eine Raumtemperaturregelung am Gerät haben?

Ja, Raumtemperaturregelung im Gerät.

Die Ventilatoren starten automatisch, wenn die interne Steuerung heißes/kaltes Wasser durch den Kühler schickt.

Heizung: Temperaturregelung über das thermostatische Heizkörperventil (TRV)
Kühlung: Thermostatkopf/Adapter ist auf Kühlung eingestellt, keine Temperaturregelung

Die Ventilatorgeschwindigkeit wird mittels einer 3-Stufen-Regelung eingestellt

JAGA ACO

Kodierung: D09

Nein, Raumtemperaturregelung außerhalb des Gerätes.

Die Ventilatoren starten automatisch, wenn die externe Steuerung heißes/kaltes Wasser durch den Kühler schickt

Ohne 0-10V-Signal:

- Raumthermostat (Keiner-Jaga)
- Zonenregelung mit Raumtemperaturregelung
- Kessel- oder Wärmepumpenregelung mit Raumtemperaturregelung
- Hausautomation mit Raumtemperaturregelung
- andere externe Raumtemperaturregelungen

Wählen Sie 1 von 3 Ventilatorgeschwindigkeiten (die Geschwindigkeit wird nicht an die Raumtemperatur angepasst)

JAGA ACO

D09

0-10V-Signal für Ventilatorsteuerung verfügbar von

- Jaga-Raumthermostat mit 0-10V-Signal zum Gerät
- Hausautomation mit 0-10V-Signal zum Gerät verfügbar

Die Ventilatorgeschwindigkeit wird über einen 0-10-V-Anschluss an die Elektronik im Kühler gesteuert.

Die angegebenen Leistungen bei ΔT 50 und ΔT 60 sind exakte Werte. ΔT 50 ist nach EN442 gemessen, ΔT 60 nach EN442 berechnet. Für alle anderen ΔT gibt diese Tabelle einen durchschnittlichen Korrekturfaktor, gültig für alle Abmessungen.

Auf www.jaga.com/selection-tools/ finden Sie Berechnungstools mit den exakten Leistungen. Die Online-Berechnungstools werden immer mit den neuesten Daten aktualisiert. Geringfügige Differenzen zwischen bereits gedruckten Tabellen und den verschiedenen Online-Berechnungstools sind daher völlig normal und liegen innerhalb der vom Standard vorgegebenen Toleranzgrenzen.
