# STRADA HYBRID

## DIMENSIONS (in mm)

## STANDARD DELIVERY

- Low-H<sub>2</sub>O heat exchanger with wall brackets and fixing kit, air vent 1/8" and drain plug 1/2"
- partially assembled casing for a connection on the bottom left or bottom right
- cover plate in stainless steel effect for the side panel at the opposite end from the valve
- easy to install fan unit with operation, control and 24VDC power supply

**!** This heater is not equipped with a condensation monitor. It has to be integrated into the installation (only for cooling).

## COLOURS

Eco-friendly, scratch-resistant powder coating with high UV-resistance

### Standard colours

- traffic white RAL 9016 (133), soft touch lightly structured satin lacquer
- sandblast grey (001), fine texture metallic lak
- off-black (145), soft touch lightly-textured satin lacquer

### Other colours

see Jaga colour chart.

Surcharge depends on the length of the unit:

- Length < 100 cm
- Length of 100 cm to 200 cm
- Length > 200 cm

## TOWEL RAIL

CODE	L	
5501 001	560	in chrome-plated aluminium
5501 002	660	in chrome-plated aluminium

## ORDER CODE

STRW 035 050 11 XXX DDD

TYPE	POSITION	CONTROL PANEL	EXTERNAL 0-10 V CONTROL	WATER TEMPERATURE SENSOR	AIR TEMPERATURE SENSOR
Jaga ACO (D09)	  	✓	-	✓	✓
Jaga BMS 0-10V control (D03)	 	-	✓	✓	-
Jaga TPT (D01)	 	✓	-	✓	✓

**JAGA ACO (D09)**

- The fan speed is selected manually in 3 modes via the control panel.
- When the water temperature is lower than 24°C and the air is warmer than the water in the heat exchanger, the fans will start. The unit will then cool the area.
- When the water temperature is higher than 28°C and the air is colder than the water, the fans will start. The unit will then heat the area.
- The unit will **automatically switch** from heating to cooling and to standby mode.

**JAGA BMS 0-10V CONTROL (D03)**

- The fan speed is only **controlled by a 0-10V (DC) signal** via an external control system that is installed into the electronics of the unit. The 0-10V signal can come from a Jaga thermostat or another home automation or building management system.
- When the control voltage is 1V or higher and the water temperature is higher than 28°C or lower than 24°C, the fans will start rotating. The rotational speed will increase proportionally with the configured control voltage. At 10V control voltage, the fans will rotate at maximum rotational speed.
- When a Hybrid unit with Jaga BMS control is equipped with a **thermoelectric valve motor** connected to the internal electronics, the valve will open when the control voltage exceeds 1V.

**JAGA TPT (D01)**

- The fan speed is automatically controlled in function of the preset comfort temperature via the fingertip controls. This allows the unit to be very silent once the comfort temperature is reached.
- When a Hybrid unit with Jaga TPT control is equipped with a thermoelectric valve motor connected to the internal electronics, the unit will take over the function of room thermostat. Based on the room temperature measurement, the unit will then switch on or off the water flow through the unit itself.
- If you wish to **set the room temperature** via another system that enables or disables the water flow through the unit, you do not need to connect a thermoelectric valve motor to the internal controller. The TPT controller will then only control the fan rotational speed based on the set comfort temperature. Intuitively, you will then use the fingertip control to get more or less fan support when the comfort temperature is reached.
- When the water temperature in the heat exchanger is lower than 24°C, the fans will start. The unit will cool the area.
- When the water temperature is higher than 28°C, the fans will start. The unit will heat the area.

Would you like the unit to have room temperature control?

**Yes, unit with integrated room temperature control**  
Fans will start automatically when the internal control sends warm/cold water through the radiator.

**No, unit without integrated room temperature control**  
Fans will start automatically when the external control sends warm/cold water through the radiator

- Without 0-10V signal:
- room thermostat (None-Jaga)
  - area control with room temperature control
  - boiler or heat pump control with room temperature control
  - home automation with room temperature control
  - other external room temperature controls

- 0-10V signal for fan control available from
- Jaga room thermostat with 0-10V signal to unit
  - home automation with 0-10V signal to unit

Heating: temperature control via thermostatic radiator valve (TRV)  
Cooling: thermostatic radiator valve/adaptor is on cooling mode, no temperature control

Fan speed is determined by 3-position control

**JAGA ACO**

Coding: D09

Temperature control via control panel on unit (thermoelectric valve in the radiator connected to unit electronics)

Fan speed adapts to the room temperature and the set target room temperature (via fingertip control)

**JAGA TPT**

D01

Choose 1 of 3 fan speeds (speed will not adjust, depending on room temperature)

**JAGA ACO**

D09

Fan speed will adjust to the room temperature. Set the temperature range via the control panel.

**JAGA TPT**

D01

Fan speed is controlled by 0-10V connection to the electronics in the radiator.

**JAGA BMS**

D03

## STANDARD: CONNECTION LEFT OR RIGHT WITH CONTROLS BELOW

Left or right downwards, to the wall or to the floor. Wall connection from the underside of the panelling or completely concealed within the panelling. The installer can rotate the heat exchanger to accommodate a left or right-side connection.

Compatible Eurocone connection sets: 101, 102, 103, 104, 181, 182, 183, 184, 222, 225, 226, 282, 285  
Compatible M24 connection sets: 11, 12, 13, 14, 25

### Example of connection to the right (standard)

### Example of connection to the left

## CONNECTION LEFT OR RIGHT WITH CONTROLS ABOVE

Complete the radiator code with 30 (left) or 60 (right). EX. STRW 035 050 06 XXX D09 60

Compatible Eurocone connection sets: 115, 116, 117, 118

### Example of connection to the right (standard)

### Example of connection to the left

## CONNECTION LEFT OR RIGHT WITH REMOTE CONTROL

Complete the radiator code with 00 (closed sides). EX. STRW 035 050 06 XXX D01 00

Compatible Eurocone connection sets: 111, 112, 113, 114  
Compatible M24 connection sets: 28, 29

### Example of connection to the right (standard)

### Example of connection to the left

When a Hybrid unit with Jaga TPT control is equipped with a thermoelectric valve motor connected to the internal electronics, the unit will take over the function of room thermostat. Based on the room temperature measurement, the unit will then switch on or off the water flow through the unit itself. If you wish to set the room temperature via a room thermostat, area control, home automation or other system that activates or deactivates the water flow through the unit, you do not need to connect a thermoelectric valve motor to the internal controller. The Jaga TPT controller will then only modulate the fans in speed based on the measured room and water temperature.

Output measured in accordance with EN 16430  
 \*Noise measurement according to ISO 3741:2010, at  
 a 2-m distance from the unit and with an assumed  
 room attenuation of 8 dB(A)/room volume 100 m<sup>3</sup> /  
 reverberation time 0.5 sec.

Output measured in accordance with EN 16430  
 \*Noise measurement according to ISO 3741:2010, at  
 a 2-m distance from the unit and with an assumed  
 room attenuation of 8 dB(A)/room volume 100 m<sup>3</sup> /  
 reverberation time 0.5 sec.

Output measured in accordance with EN 16430  
 \*Noise measurement according to ISO 3741:2010, at  
 a 2-m distance from the unit and with an assumed  
 room attenuation of 8 dB(A)/room volume 100 m³ /  
 reverberation time 0.5 sec.

The indicated outputs at  $\Delta T$  50 are exact values, measured in accordance with EN442. This table provides a calculated value using an average correction factor for all other  $\Delta T$  outputs, valid for all dimensions.

Click [www.jaga.com/selection-tools/](http://www.jaga.com/selection-tools/) to download the calculation tools with the exact outputs. The online calculation tools are kept up to date with the most recent data. Minor output differences between printed tables and the different online calculation tools are therefore completely normal and within the margins of tolerance imposed by the standard.
