INSTALLATION IN A WALL RECESS HYBRID

DIMENSIONS (in mm)

STANDARD DELIVERY

- Low-H₂O heat exchanger with wall brackets and fixing kit
- air vent elbow 1/8" and drain plug 1/2"
- separation wall dark grey lacquered (not suitable as finished casing)
- easy to install fan unit with operation, control and 24VDC power supply
- clear installation instructions

! This heater is not equipped with a condensation monitor. It has to be integrated into the installation (only for cooling).

ORDER CODE

					D01: Jaga TPT
					D03: Jaga BMS
					D09: Jaga ACO
					Type
					Length
					Height

TYPE	POSITION	CONTROL PANEL	EXTERNAL 0-10 V CONTROL	WATER TEMPERATURE SENSOR	AIR TEMPERATURE SENSOR
Jaga ACO (D09)	  	✓	-	✓	✓
Jaga BMS 0-10V control (D03)	 	-	✓	✓	-
Jaga TPT (D01)	 	✓	-	✓	✓

JAGA ACO (D09)

- The fan speed is selected manually in 3 modes via the control panel.
- When the water temperature is lower than 24°C and the air is warmer than the water in the heat exchanger, the fans will start. The unit will then cool the area.
- When the water temperature is higher than 28°C and the air is colder than the water, the fans will start. The unit will then heat the area.
- The unit will **automatically** switch from heating to cooling and to standby mode.

JAGA BMS 0-10V CONTROL (D03)

- The fan speed is only **controlled by a 0-10V (DC) signal** via an external control system that is installed into the electronics of the unit. The 0-10V signal can come from a Jaga thermostat or another home automation or building management system.
- When the control voltage is 1V or higher and the water temperature is higher than 28°C or lower than 24°C, the fans will start rotating. The rotational speed will increase proportionally with the configured control voltage. At 10V control voltage, the fans will rotate at maximum rotational speed.
- When a Hybrid unit with Jaga BMS control is equipped with a **thermoelectric valve motor** connected to the internal electronics, the valve will open when the control voltage exceeds 1V.

JAGA TPT (D01)

- The fan speed is automatically controlled in function of the preset comfort temperature via the fingertip controls. This allows the unit to be very silent once the comfort temperature is reached.
- When a Hybrid unit with Jaga TPT control is equipped with a thermoelectric valve motor connected to the internal electronics, the unit will take over the function of room thermostat. Based on the room temperature measurement, the unit will then switch on or off the water flow through the unit itself. When the water temperature in the heat exchanger is lower than 24°C, the fans will start. The unit will cool the area.
- If you wish to **set the room temperature via another system** that enables or disables the water flow through the unit, you do not need to connect a thermoelectric valve motor to the internal controller. The TPT controller will then only control the fan rotational speed based on the set comfort temperature. Intuitively, you will then use the fingertip control to get more or less fan support when the comfort temperature is reached.
- When the water temperature in the heat exchanger is lower than 24°C, the fans will start. The unit will cool the area.
- When the water temperature is higher than 28°C, the fans will start. The unit will heat the area.

Would you like the unit to have room temperature control?

Output measured in accordance with EN 16430
 *Noise measurement according to ISO 3741:2010, at
 a 2-m distance from the unit and with an assumed
 room attenuation of 8 dB(A)/room volume 100 m³ /
 reverberation time 0.5 sec.

Output measured in accordance with EN 16430
 *Noise measurement according to ISO 3741:2010, at
 a 2-m distance from the unit and with an assumed
 room attenuation of 8 dB(A)/room volume 100 m³ /
 reverberation time 0.5 sec.

Output measured in accordance with EN 16430
 *Noise measurement according to ISO 3741:2010, at
 a 2-m distance from the unit and with an assumed
 room attenuation of 8 dB(A)/room volume 100 m³ /
 reverberation time 0.5 sec.

Output measured in accordance with EN 16430
 *Noise measurement according to ISO 3741:2010, at
 a 2-m distance from the unit and with an assumed
 room attenuation of 8 dB(A)/room volume 100 m³ /
 reverberation time 0.5 sec.

Output measured in accordance with EN 16430
 *Noise measurement according to ISO 3741:2010, at
 a 2-m distance from the unit and with an assumed
 room attenuation of 8 dB(A)/room volume 100 m³ /
 reverberation time 0.5 sec.

INSTALLATION IN A WALL RECESS HYBRID

CORRECTION FACTORS

The indicated outputs at ΔT 50 are exact values, measured in accordance with EN442. This table provides a calculated value using an average correction factor for all other ΔT outputs, valid for all dimensions.

Click www.jaga.com/selection-tools/ to download the calculation tools with the exact outputs. The online calculation tools are kept up to date with the most recent data. Minor output differences between printed tables and the different online calculation tools are therefore completely normal and within the margins of tolerance imposed by the standard.

Wanneer een toestel niet voorzien is van een aangesloten condensafvoer, dan moet er voorkomen worden dat er condens op de warmtewisselaar in het toestel ontstaat. Dit is sowieso van toepassing op Jaga toestellen "light cooling". Om condensvorming te voorkomen moet de watertemperatuur hoger zijn dan het dauwpunt van de lucht waarin het toestel opereert. In deze tabel is de minimale watertemperatuur weergegeven waarboven een toestel kan werken om condens te voorkomen.
